

National Space Day Hackathon

Lunar Craters named after Indian Scientists, Physicists and Astronomers

1. It is a lunar impact crater that is attached to the western outer rim of the larger crater Mach, on the far side of the Moon. It is named after an Indian physicist and Padma Bhushan award recipient known for his pioneering work in the field of ionosphere and radiophysics.

Coordinates - 18.0°N , 157.4°W

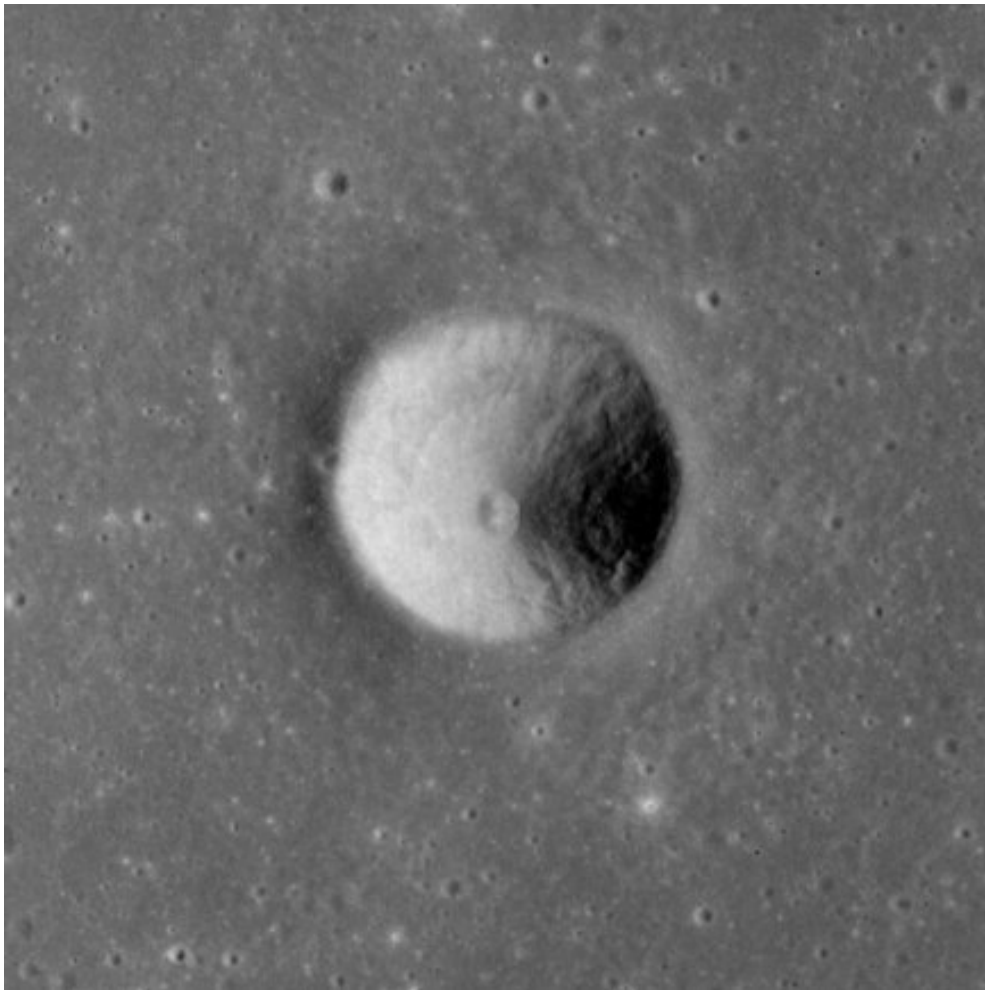

Scale : 1 cm = 61.34 km (approx)

2. It is a small, circular, bowl-shaped crater on the Mare Serenitatis, in the northeast quadrant of the Moon. This crater was named after an Indian astrophysicist who is considered as the Father of the Indian Space Programme.

Coordinates - 24.7°N , 21.0°E

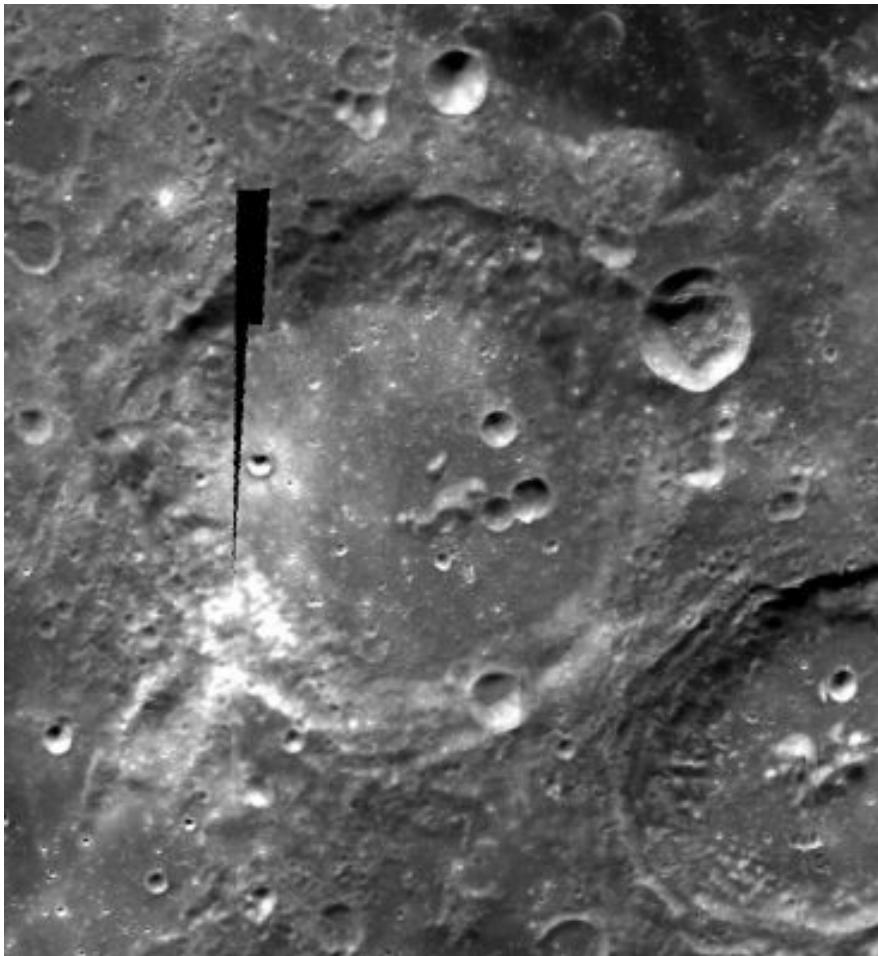

Scale : 1 cm = 1.78 km (approx)

3. It is a lunar impact crater that is located on the far side of the Moon, in the southern sphere hemisphere. It lies just to the northwest of the smaller crater Bhabha. The crater is named after an eminent Indian polymath, known for his works on wireless communication.

Coordinates - 53.5°S , 170.0°W

Scale : 1 cm = 12.13 km (approx)

4. It is a lunar impact crater that is located in the southern part of the Moon's far side. It is nearly attached to the southeast rim of the larger crater Bose. It was named in honor of an Indian nuclear physics pioneer in his home country of India.

Coordinates - 55.1°S , 164.5°W

Scale : 1 cm = 11.63 km (approx)

5. It is the remnant of a lunar impact crater located in the eastern Mare Tranquillitatis, named after an Indian astronomer who is known for discovering the “*shunya*”.

Coordinates - 6.2°N, 31.5°E

Scale : 1 cm = 2.75 km (approx)
